

Evaluating Approaches to Learning with Skill Tracker

SUBJECT TEACHERS

Challenge your students to log 3 skills in one week

You can specify the category and cluster OR be more open to student feedback and give them free choice to log any 3 skills

Remind students to add a note about why they chose that skill and a short reflection on what they might want to change or improve.

Analyse the data

At the end of the week, analyse the skills that students have logged in comparison to what you had in your planner. Compare the evidence that students have logged in connection to their skills, and how this connects with the learning that you had planned.

Plan and adapt

Based on your analysis, what changes do you need to make in your teaching methods, resources or units? What goals are you setting with your students to develop their skills?

ADVISORY/TUTORS

Challenge your students to log 3 skills in one week

Students can log skills in any subject or connected to extra-curricular activities. Remind them that activities like creating a daily schedule or trying out a new online learning tool are skills!

Extend the challenge to logging 3 skills a week for a whole month.

Analyse the data

At the end of the week/month, analyse the skills that students have logged. What trends do you notice over time? Are some subjects/skills featuring much more than others? What skills are students not logging?

Plan and adapt

Based on your analysis, what data can you share with teaching teams? What resources do you need to provide for your students to support their skill development?
